SYNOPSIS

This practical, case-based Zoom lecture provides general dental practitioners with a framework for recognising orthodontic problems, understanding ideal treatment timing based on malocclusion, and making confident clinical decisions.

The session covers efficient screening, common patient questions, and the role of growth modification, camouflage, and orthognathic surgery.

Established Invisalign approaches – including Invisalign First, Mandibular Advancement, and the Invisalign Palatal Expander – will also be discussed.

This Zoom session is part of our **2026 Zoom Series**, where Royce Dental Group specialists will share their expertise and answer any questions you've had on when and under what circumstances to refer patients. Spanning disciplines such as Orthodontics and Periodontics, this is a **must-attend learning series you don't want to miss!**

ABOUT THE SPEAKERS

DR MATTHEW LAU
ORTHODONTIST

Dr Matthew Lau has trained extensively in public institutions and served in the Orthodontic Department (NDCS), managing a wide range of cases such as interceptive orthodontics, growth modification, surgical orthodontics, and clear aligner therapy.

Dr Lau was a recipient of the Singapore Health Quality Service Award (2019) and has led a Duke-NUS Clinical Innovation Support Programme-funded research project on UV-based dental disinfection technology.

An active contributor to the orthodontic community, Dr Lau has published in international journals, presented at major global conferences, and currently serves on the Executive Committee of the Association of Orthodontists (Singapore) and the Asian Pacific Orthodontic Society.

DR ERYN CHAN
ORTHODONTIST

Dr Eryn Chan served in the public sector, gaining valuable clinical experience across a diverse range of settings including National Healthcare Group Polyclinics, the School Dental Service (Health Promotion Board), and the National Dental Centre Singapore (NDCS) - where she also held the role of Dental Officer in-charge.

During her time at NDCS, she managed a wide range of orthodontic cases—from early interceptive treatment and impacted teeth, to cleft and craniofacial anomalies, as well as complex orthodontic-orthognathic (jaw surgery) cases in adults. She also explored the role of innovation in orthodontics and was the lead author of a study titled "3D Printed Twin Block: A Feasibility Study". The study was published in the Annals of 3D Printed Medicine, and examined the potential use of 3D printing in orthodontic appliance design.

UPCOMING SESSION

Monday, 8PM - 9PM

**Saving Periodontally Compromised
Teeth with Surgical Approaches**
(e.g. OFD / Regenerative Treatment)
